

Identity and Consent Management for EU Digital and Data Strategies

Objectives

- Address the critical issues of identity management, consent management, and personal information sharing and usage between diverse contexts, technologies, and administrative domains.
- Deliver a complete framework agnostic to existing services and technologies that enables users (data subjects) to keep control of their identity information and monitor data sharing and processing.
- Align CONSENTIS solutions with EU strategic initiatives and regulations and boost the EU data economy and innovation capacity of EU digital and data strategies.
- Validate CONSENTIS identity solutions in multiple scenarios involving data transferring and processing across diverse actors, domains and contexts.
- Connect with external stakeholders (industry, academia, policy makers and regulators) to promote project results and receive valuable feedback. Aim for high societal and market impact.

“CONSENTIS FRAMEWORK IS AGNOSTIC TO EXISTING SERVICES AND FORMATS AND GUARANTEES HIGH LEVELS OF PROTECTION AVOIDING POTENTIAL LEGAL UNCERTAINTY, THROUGH A CONTINUOUS ASSESSMENT MECHANISM FOR SECURITY, RISK AND LEGAL ASPECTS”
